

This is a listing of transmission options for various B models that I have sales literature for. Do not consider this to be a total list of transmissions used since I do not have a complete set of sales literature and also Mack could have built some B's with transmissions that were not listed in literature.

The explanation of transmission letters and numbers below will, hopefully, clear up some of the mud on the following pages.

- TR** -- 5 speed transmission without compound box attached.
- TRD** -- 5 speed transmission with 2 speed compound box attached.
This is called a **duplex transmission**.
- TRDL** -- Same as above but with aluminum case. L stands for weight reduced or light weight.
- TRDX** -- Same as TRD but with low hole gear. X stands for severe service.
- TRDXT** -- Same as above with the addition of a transfer case for front wheel drive.
- TRT** -- 5 speed transmission with 3 speed compound box attached.
This is called a **triplex transmission**.
- TRTL** -- Same as above but with aluminum case. L stands for weight reduced or light weight.
- TRTX** -- Same as TRT but with low hole gear. X stands for severe service.
- TRQ** -- 5 speed transmission with 4 speed compound box attached.
This is called a **quadruplex transmission**.

The numbers following the letters tell sizes and revisions which is over my head. The last number will tell some important features.

- 0** -- Transmission is **overdrive** in high gear
The following do not apply to straight 5 speed transmissions
- 3** -- Transmission is called a **mono-shift**
- 30** -- Transmission is called an **overdrive mono-shift**
- 5** -- Transmission is called a **uni-shift**
- 50** -- Transmission is called an **overdrive uni-shift**

Transmission model numbers are usually stamped in left side of transmission case.

Auxiliary transmission model numbers are usually on a tag located on right side of case.
